New trial of online intervention for alcohol and depression offers hope for young people missing out on treatment

- NDARC is conducting the first ever trial of a brief online intervention to treat combined depression and alcohol misuse in young people
- One in five young people age 16-25 with depression also have problems with alcohol use
- 14% of young people who misuse alcohol meet criteria for depression
- Online delivery will target the more than 75% of young people with mental health disorders who don't access health services
- The program builds on existing & proven e-health treatments for the general population

Young people (aged 18-25) are being invited to take part in the first ever trial of an online brief intervention designed to treat co-occurring alcohol misuse and depression.

While other e-health interventions have targeted depression or alcohol use individually, [The DEAL Project](#) (for DEpression and ALcohol) is the first online brief intervention that aims to address both conditions together, in a program specially designed for young people.

Developed by researchers at the National Drug and Alcohol Research Centre (NDARC), with input from young Australians, the intervention is especially important because it circumvents many of the barriers that currently prevent young people seeking treatment. Research has shown less than 25% of young Australians with a mental disorder seek treatment due to impediments such as geographical isolation and perceived stigma.

Hopes for The DEAL Project are high as it is modelled on an existing and proven e-health intervention called [SHADE](#). Also developed by NDARC researchers, SHADE treats co-occurring substance use and depression in the general population.

Doctoral candidate Mark Deady is leading The DEAL Project trial and explained that drinking to reduce or regulate negative emotions is a powerful predictor of heavy and problematic drinking in young people, however, few of these young people receive any form of care in traditional services.

"We know from national surveys that one in five people aged 16-25 with depression also meet the diagnostic criteria for an alcohol use disorder. Similarly, 14% of young people with an alcohol use disorder also meet criteria for depression.

“Right now, there are few resources available to these young people. We’re hoping The DEAL Project intervention will help plug that gap.

“The intervention is online so it’s easy to access and it requires minimal time commitment from participants.

“The trial will give us a lot more information on the efficacy and acceptability to young people of this type of treatment,” Deady said.

The DEAL Project targets 18-25 year olds and teaches evidence-based psychological coping skills and strategies that young people can utilise to help manage their mood and/or drinking behaviour.

Participants are asked to complete one online module a week for four weeks. Assessment will take place online at baseline, five, 12 and 24 weeks to track their progress.

Those interested in taking part in The DEAL Project can apply here: <http://dealproject.org.au/>

- Ends -

The National Drug and Alcohol Research Centre is supported by funding from the Australian Government under the Substance Misuse Prevention and Service Improvements Grants Fund.

The DEAL project is being run by the [Centre of Research Excellence in Mental Health and Substance Use](#), a research consortium based at NDARC. The CRE is funded by a grant from the National Health and Medical Research Council (NHMRC).
